

DAILY CLEANING

1 PREPARE BREWER

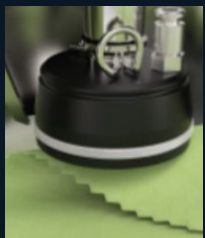

Open the door of the machine and pull the scraper (the square tray) towards you.

Clean the platform and scraper with the TopBrewer brush and remove all coffee remains.

Clean the top piston (flat side) thoroughly with the TopBrewer microfiber cloth. The stainless steel bottom piston must be completely clean with no coffee remains.

Push the scraper back underneath the top piston and place a cleaning tablet on the stainless steel bottom piston in the scraper tray.

Close the door of the machine.

2 PREPARE MILK SYSTEM

Fill the measuring cup with cappuccino cleaner and water

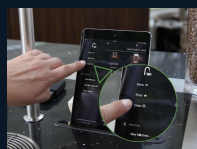

Single milk system: Use 30ml of cappuccino cleaner (blue liquid) and fill up with warm water to 600ml.
Dual milk system: Use 40ml of cappuccino cleaner and fill up with warm water to 800ml

Only with Smart Fridge: Put the Service Key magnet in place (or push the clean switch) and remove the milk container from the fridge but leave the lid inside - connect with a 'click'.

Put the tube(s) in the measuring cup and close the door.

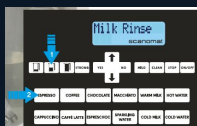

3 START CLEANING

Select 'clean' on the iPad in the menu.

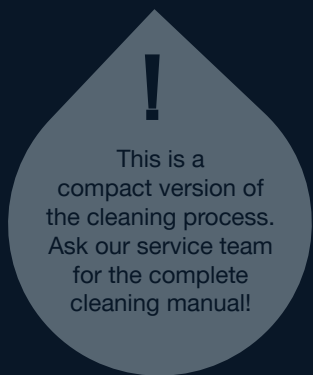

When the cycle has finished completely, remove the measuring cup from the fridge and refill with 600ml of fresh cold water and put the tubes back.

Select the half jug icon on the coffee machine followed by far left button of the second row (this button will show espresso or coffee - depending on your machine).

Put back the milk(container), select a cappuccino to fill the tubes again and the machine is ready to use.
